

Tefzel(R) Fluoropolymer Resin Ethylene & TFE Copolymer

Description:

Translucent pellets suitable for melt extrusion, compression, and injection molding. TEFZEL(R) is also available as a 25 percent glass-fiber-reinforced molding resin and as a powder. The fiber-reinforced resin is used for applications requiring less load deformation and better wear resistance, and the powder for rotomolding.

Uses:

Electrical components

Labware

Valve linings

Tubing

Monofilaments

Unsupported pipe

Electrical insulation and jacketing for:

- Aircraft computers
- Heater cables
- Automotive
- Oil well logging cable
- Rapid transit
- Wire and cable applications

Industries:

Aerospace and Aircraft

Appliances

Automotive

Chemical Processing

Communications

Computers and Electronics

Control Systems

Furniture

Industrial Machinery

Medical and Healthcare

Military

Mining

Oil and Gas Extraction

Petroleum Refining and Distribution

Rail Transportation

Wire and Cable
